-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lyons, III et al. (U.S. 5,263,967) in view of Chin (U.S. 4,452,244).

Lyons, III et al discloses substantially the claimed invention in figures 2-5, except for each jaw having a respective roller mounted thereon for free rotational movement.

However, Chin teaches in figures 1-4, that it is known in the surgical art to have jaws (24,26) including rollers (28,30) mounted thereon for free rotational movement.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Lyons, III et al's jaws (60a,60b) by substituting for jaws (24,26) including rollers (28,30) as taught by Chin in order to move the roller clamped instrument along the artery to strip the core of plaque from the artery and enable its removal through incision.

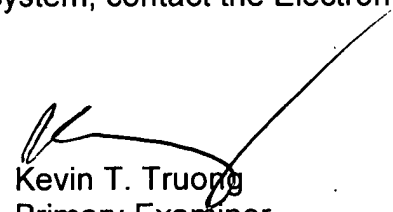

**Conclusion**

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Klaas (U.S. 5,630,821) discloses contact elements are mounted rotatably on the respective gripping elements.
